EXAMPLE DATA — FICTIONAL DEMO CASE FOR BATATIS — NOT A REAL PROJECT, PRODUCT, PERSON, TEST OR APPROVAL

Project brief: Example Crescent infill house

From: Priya Natarajan, Larkspur Example Homes *(fictional)* **Date:** 2026-10-16

Item	Detail
Address	0000 Example Crescent NW, Edmonton, AB *(fictional)*
Legal	Lot 0, Block 0, Plan 0000000 *(fictional placeholder)*
Owner (client)	J. & R. Example *(fictional)*
Builder / applicant	Larkspur Example Homes *(fictional)*
Building	Detached single-family, 2 storeys, ~210 m², no suite, **no sprinklers**
Permit	Not yet applied for
Designer	In-house drafting (no architect or engineer of record yet). Truss and spray-foam suppliers to be confirmed.

Design features we think are "different"

1. **No basement.** A slab-on-grade with in-floor hydronic heat. We want **R-7.5 rigid insulation** under the slab (the code table says more; we heard there's a STANDATA).
2. **Flat-look roof** (low slope) with **no attic vents**. Closed-cell spray foam sprayed under the roof deck, with batts below.
3. **Bedroom 3 "slot" window:** the client loves a tall, narrow casement on the street side. Clear opening per the supplier is **400 mm wide × 780 mm high**. It's the only window in that bedroom.

Ask

Tell us what needs a variance, and draft whatever's needed so we can apply for the permit by mid-November.
