EXAMPLE DATA — FICTIONAL DEMO CASE FOR BATATIS — NOT A REAL PROJECT, PRODUCT, PERSON, TEST OR APPROVAL

Project brief: Example Commons, firestop issue on L3–L4

From: Carlos Mendes, PM, Northgate Example Builders Ltd. *(fictional)* **Date:** 2026-10-15

Project

Item	Detail
Name	Example Commons *(fictional)*
Address	0000 Example Avenue SW, Calgary, AB *(fictional)*
Legal	Lot 0, Block 0, Plan 0000000 *(fictional placeholder)*
Owner	Example Commons Holdings Inc. *(fictional)*
Building permit	BP-0000-00000 *(fictional)*, issued
Building	5 storeys, sprinklered, retail at grade, 64 dwelling units above
Design team	Example Architecture Inc. *(fictional)*, coordinating registered professional; Example MEP Engineering *(fictional)*
Floor assemblies	Rated fire separations. *Rating per the architect's code analysis: "1 h"*

What happened

Our firestop sub sealed the plumbing penetrations on L3 and L4 with **Example FireSeal 200** *(fictional)* and handed in listing **EX-FS-1234** *(fictional)*. The third-party firestop inspector says that listing only covers **metal pipes**. Ours are mostly **PVC drain pipe and bundles of PEX**, and some holes are bigger than the listing allows. L2 (copper) passed.

The sprinkler fitter used the same sealant around the sprinkler branch lines. The sub says sprinklers are "exempt".

What we need

- Keep the **drywall close-in on 2026-10-24**
- Ideally "a variance so we don't have to rip it out"
- We have a **draft EJ email** from the sealant rep

Who we've talked to

- Architect (email attached). Not yet the City inspector.
